Maturity model assessment of our good practice – “context”

Maturity model assessment of our good practice – “the experience”

- ▶ A quick overview made us realize that good practice “leaders” should not do the assessment alone – not a “single person” job
- ▶ Multi-disciplinary team with various roles, backgrounds and duties/assignments needed to analyse and understand each dimension
- ▶ Gave good “food for thought” – further discussion about our system
- ▶ Excellent way of visualizing

Maturity model assessment of our good practice – “outcomes”

- ▶ Regional learning – our healthcare system – its strengths and weaknesses
- ▶ What steps can we take to accelerate the rate of adoption and development of integrate care solutions?
- ▶ Analysis and decision support
- ▶ Proposal in terms of process, structural and systemic change

Overall conclusions

- ▶ What changes do we need to/can we make now?
Which need to be processed and need policy support?
- ▶ A maturity assessment requires a multi-stakeholder approach – increases the validity of the “choices/answers”
- ▶ If possible – maybe simplify terminology to suit as many people as possible. Otherwise translations might be in place.
- ▶ When trying to make a “shift” towards a more integrated care – “friendly” healthcare system a maturity assessment can guide you.
