# Integrated Care in Norrbotten Region

- Chains of care is an integrated care model developed in Sweden with the aim of linking primary, hospital and community care through integrated pathways based on local agreements between providers.
- Typical chains of care include screening element in a primary care centre, treatment plans developed in specialist centre and rehabilitation provided in community. Contractual agreements and alignment of incentives that enable efficient use of resources are distinctive features of the Swedish model.

# Readiness for Integrated Care -

## “Stakeholders’ Perspective”

# Self - Assessment in Norrbotten–

## “Outcomes”

We do not have much formalized in the Innovation management process. No functions which can work in all parts of the process. Procurement is very much far removed from the process today.

Robust ICT infrastructure  
Regional Digital first policy  
Electronic health record implemented since 1994  
Various telemedicine services deployed and implemented across the region

No common/systematic approach. Fragmented evaluations when services are implemented

No specific model used for projects or scaling up where you can find support to overcome known inhibitors. Different models have been used with different results

We do have a somewhat fully integrated health and social care service with collaboration on all three levels but there are still parts that can be improved

Everyone has access to their own EHR, lab-results, open comparisons, quality registers, specific national registers. Personcentered approach, strategy and action plan for citizen involvement

**THANK YOU!**
